

CS-205 Spring 2020, Operating Systems

Assignment: 1

Due Date: 10th March 2020

1. Make a “hello world” system call.
 - You need to download a newer version of kernel and *name that kernel your roll number* (if teacher execute command `uname -r`, it must display your roll number as kernel version)
 - Add a hello world system call with the help of this [tutorial](#).
 - Then configure kernel with the help of given lab manual 5.

Checking Criteria:

Students are required to save a screenshot of each step and define it in word doc with sequence; the document (*named: k174224_OS_A1.doc*) will be submitted on slate. Students have to bring their laptop for a demo of the assignment in lab timings.

Note: In case of any ambiguity consult your lab instructor.

“Smart people learn from everything and everyone, average people from their experience and stupid people already have all the answers.” Socrates
